MULTI CLEAN™ SYSTEM

Always clean, always warm, always inviting. The Multi Clean™ System is customizable allowing proper circulation in combination with cleansing Antimicrobial Filtration, providing spa water that is maintained efficiently and effectively.

CUSTOM CIRCULATION SYSTEM

Geyser models have Customizable Circulation Cycles designed for your lifestyle. This system can circulate and filter thousands of gallons of water using up to four different circulation cycles.

ANTIMICROBIAL FILTRATION

The Antimicrobial Filtration is designed to inhibit odor, mold and mildew on the surface of the filter cartridge. The Multi Zone™ system is designed to circulate water through these Antimicrobial cartridges. This will ensure your spa water has been properly filtered.

OPTIONAL: MULTI ZONE™ OZONE

Ozone, a natural sanitizer, will help in providing a better soaking atmosphere in your spa water. The Multi Zone™ ozone generator is standard on your Geyser Spa.

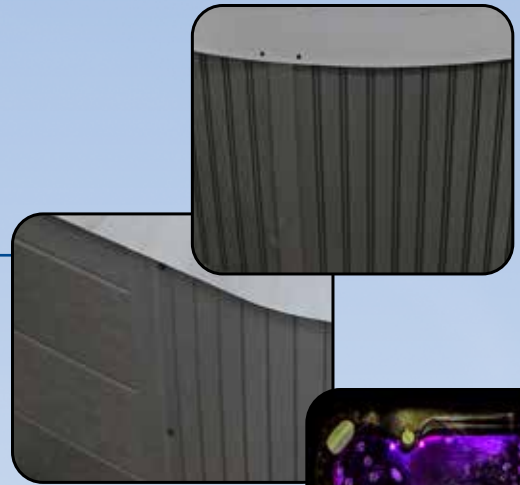

GEYSER SPAS™ OPERATIONS CENTER

The Operations Center contains Lifestyle Programming spa functions to fit all user preferences and schedules. The Horizontal Mount Heater thermostatically keeps the spa always ready to use and in the most efficient way possible.

FEATURES AND OPTIONS

MULTI WEATHER™ EXTERIOR •

The Multi Weather™ exterior is designed as a low maintenance and durable product. It is designed for easy care while continuing to look great for years to come.

SARATOGA LED LIGHTING •

Our Saratoga LED Lighting system is a standard feature on the Geyser Spas Line. This LED System uses key locations throughout the spa, offering an array of bright digital colors and sequences to increase your spa use enjoyment.

DUO TONE™ JET ACCENTS •

Duo Tone™ Jet accents are standard features on the Geyser Spas. They provide a modern look highlighting the spa's appearance.

THERMAL BOND™ INSULATION SYSTEM •

The Thermal Bond™ Wrap Insulation System is standard on all Geyser Spas models and utilizes three key components in providing efficient heat retention and lower operating costs. First and foremost is the spa cover that seals in the heat from the top. Secondly we use the Thermal Bond™ Wrap Insulation to retain warm air that is created inside the spa cabinet. Thirdly, the sealed base helps inhibit warm air in and cold air out of the bottom of the spa cabinet. These components allow you to soak in a spa that is ready when you are.
